

Super Market Sales & Forecast Analysis Dashboard (Power BI)

Project Overview

This project showcases an **interactive Power BI dashboard** built to analyze **supermarket sales performance, profitability, customer behavior, regional trends, payment preferences, shipping efficiency, and short-term sales forecasting**. The dashboard is designed for **executive and business users** to support data-driven decision-making.

Business Objective

Retail businesses require clear visibility into: - Sales and profit performance - High-performing product categories - Customer segment contribution - Regional demand patterns - Short-term demand forecasting

This dashboard consolidates these insights into a **single, easy-to-navigate reporting solution**.

Key Features

- KPI cards for **Total Sales, Profit, Orders, and Avg Shipping Days**
 - Category & sub-category performance analysis
 - Customer segment and regional contribution insights
 - Payment mode and shipping mode analysis
 - Monthly trends with **15-day sales forecasting**
 - Clean, executive-friendly layout with interactive slicers
-

Key Insights

- **Technology** is the top-performing category, with Phones driving the highest sales.
 - The **Consumer segment** contributes the largest share of total revenue.
 - **East and West regions** lead overall sales, with California as a key state.
 - Customers strongly prefer **digital payment modes (Cards & Online)**.
 - Short-term sales forecast indicates **stable and predictable demand**.
-

Tools & Technologies

- **Power BI Desktop** – Dashboard development
- **DAX** – Measures, KPIs, and time intelligence
- **Power Query** – Data transformation and cleaning
- **Data Modeling** – Relationships and analytics-ready structure
- **Time Series Forecasting** – Short-term demand analysis

Resume-Ready Summary

Developed an interactive Power BI dashboard analyzing supermarket sales, profit, customer segments, regional performance, and short-term demand forecasting using DAX and time intelligence.

Notes

- Dataset used is sample / anonymized data for analytics demonstration
 - PBIX file can be shared upon request
